(54) Title: AN APPARATUS AND METHOD FOR ALLOCATING A PRIZE

(57) Abstract: An auxiliary controller (2) communicates with the primary controller (1) via a wide area network (3). Routers (43, 44) provide an interface between the wide area network (3) and the primary controller (1) and the auxiliary controllers (2) respectively. The bandwidth of communications across the wide area network (3) is typically limited, and the controllers (2) are configured for communication and processing to obviate that bandwidth limitation.
